REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance:

Applicants' response, which included addition of new claims 14-21 and amendment to claims 1-5, 7-10, 12 and 13 along with an affidavit from Tjien Tjioe, filed on 2/12/2009, is made of record. Claims 1-5, 7-10 and 12-21 are now pending.

In view of applicants' assertion with an affidavit from Tjien Tjioe that combining two melamine streams is not obvious and one trained in the art would be actually prejudiced against combining two different melamine containing flows from two different processes for the production of melamine from urea, the prior art 103 rejection over Coufal in view of Van Hardeweld, made in the previous office action has been deemed as obviated. More specifically, applicants asserted that the factual Declaration of Dr. Tjien Tjioe, a named co-inventor of the subject invention, (a person self-evidently of greater than ordinary skill in the melamine production art) makes it abundantly clear that it is well-known to the skilled person that impurities have an unpredictable and disturbing effect on crystallization and precipitation processes. Melamine crystallization and precipitation process designs are based on experience and can be only operated and controlled within a relatively small window of composition and process parameters so as to obtain acceptable ("on-specification") product. Thus, if the amount of impurities is outside the operating window, the process gets out of control and which in turn results in unacceptable ("off-specification") product being made. Combining melamine-containing flows from two different processes for making melamine means that the amount and composition of the impurities in the respective flows will change and that

the composition of the combined stream of melamine- containing flows will then be outside the original operating window for each of the respective melamine-production processes, Thus, the ordinarily skilled person in the art of melamine production is well aware that the introduction of "strange" components into a melamine-containing flow is strictly undesirable. This is especially true for combining a melamine-containing stream from a low-pressure gas-phase process with a melamine-containing stream from a high-pressure liquid-phase process as is defined by the pending claims of the subject application, since the composition and amount of the impurities in such streams differ substantially one from the other,

b) the source of second stream of solid melamine of Coufal is from the same process and not from two different processes as required by the instant process and

c) although low and high pressure processes for making melamine are known , what is unknown -- and what the ordinarily skilled person would be prejudiced against for the reasons noted in Dr. Tjioe's Declaration -- is that melamine-containing flows from each such different process could be combined so as to make acceptable melamine product. As such, an ordinarily skilled person would not obviously combine Coufal and Van Hardeveld in the manner.

Therefore, solely based on the affidavit and applicants argument, the prior art 103(a) rejection made in the previous office action has been deemed as obviate. Hence, examiner noted that claims 1-5, 7-10 and 12-21 are in condition for allowance.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
